LambdUp

Prague's biggest functional programming event of the year

Get ready to
LambdUp your
knowledge
of functional
programming

December 6, 2017,
MeetFactory, Prague
#lambdup

The unwavering interest from developers in functional programming has been heard by [Blueberry](#), who has invited experts across functional languages, both from the Czech Republic and internationally, to Prague. The talks by Eric Norman, Andrea Leopardi, Tomáš Petříček, and other specialists, will be presented at the distinctively named 'LambdUp' on December 6, at MeetFactory in Prague. The event is intended for developers who want to gain a basic understanding of the principles and concepts of

functional programming, as well as for those who want to deepen their existing knowledge in Elixir, F #, Clojure, and Elm.

The first LambdUp – a meeting on functional programming – will take place on December 6, 2017 at MeetFactory in Prague. Its purpose is primarily to support and connect professionals and enthusiasts into functional programming across languages and technologies, and to create the spark for further innovation.

Lectures by Czech and international experts in functional programming will focus on Elixir, F # and Clojure, and will offer not only an introduction to these individual languages, but also a deeper insight into the subject itself. While Eric Normand in his lecture "A Theory of Functional Programming" will answer "What is Functional Programming?" and "Why Should I Use It?", Andrea Leopardi will give a talk called, "Property-Based Testing is a Mindset" within the language of Elixir.

LambdUp is supported by a number of Czech functional communities, such as Prague Lambda, FSharpen and Elm Prague. "We are very pleased with LambdUp not only from the quality of speakers themselves, but also from the developers who are behind the whole idea," says Antonin Hackenberg, a supervisor of the content, and adds, "We believe we can create a space for knowledge sharing and an open discussion that progresses the individual participants self-development one step further. "

Participants can look forward to talks that will be held in the afternoon, practical workshops in the morning, and finally an after party. A detailed program and more in-depth information will be published in the coming days.

The most up-to-date information can be found on the event's [website](#), or on social media through [Facebook](#) and [Twitter](#). Tickets can be purchased [here](#).
